**Subject:** OCSPP Clearance Requested: List of "Active" PFAS to post to Web  
**Attachments:** 602 TSCA Active Sanitized PFAS chemicals For Web ChemView column 5-9-19.pdf; Box text PFAS web 5 9 19.docx

**ACTION: OCSPP Clearance to Post**

Please find attached the text [WORD document] that will accompany the posting of the 'Active' lists (non-CBI and CBI) of PFAS to the OPPT PFAS Risk Management page:  
<https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/risk-management-and-polyfluoroalkyl-substances-pfass>

The actual list is also attached [PDF document "602 TSCA Active Sanitized PFAS chemicals ...]

Below are screen shots of the Test Pages (thanks Cheryl!)

Once we put this up, Cheryl will work with OPA to link other Agency PFAS pages to the list.

Screenshot of box.

# Overview

## What are PFASs and where are they found?

Many per- and polyfluoroalkyl substances (PFASs), also referred to as perfluorinated chemicals (PFCs), are found world-wide in the environment, wildlife, and humans.

PFASs are substances that have many manufacturing and industrial applications because they impart useful properties, including fire resistance and oil, stain, grease and water repellency. These chemicals are used in a wide range of industrial applications and the manufacture of consumer goods, and may be found in cleaners, textiles, leather, paper and paints, fire-fighting foams, and wire insulation.

## Why is EPA concerned about Long-chain PFASs?

EPA is particularly concerned about so-called long-chain PFAS chemicals. These are persistent in the

### PFAS on the TSCA Inventory
